Cache Page Zer Guide Com
Page Caching ¶ Page caching refers to caching the content of a whole page on the server-side. Later when the same page is requested again, its content will be served from the cache instead of regenerating it from scratch. Page caching is supported by yii\filters\PageCache, an action filter. It can be used like the following in a controller class:

Caching: Page Caching | The Definitive Guide to Yii 2.0 ...
Caching can be enabled on a per-page basis, and you can set the length of time that a page should remain cached before being refreshed. When a page is loaded for the first time, the file will be cached using the currently configured cache engine. On subsequent page loads, the cache file will be retrieved and sent to the requesting user's browser.

Web Page Caching — CodeIgniter 4.0.3 documentation
In most browsers, you can overwrite a web page's stored cache without deleting all the cache collected by the browser. In essence, this erases and replenishes the cache for that specific page only. In most browsers and operating systems , you can bypass the cache by holding down the Shift or Ctrl key as you refresh.

What is the Cache-Control Header. Cache-control is an HTTP header used to specify browser caching policies in both client requests and server responses. Policies include how a resource is cached, where it's cached and its maximum age before expiring (i.e., time to live). The cache-control header is broken up into directives, the most common of which are detailed below:

What is Cache-Control and How HTTP Cache Headers Work ...
ttl-in-cache. Forces object(s) to become cached, as if they had a Cache-Control: max-age:<time> header. Can be overruled by requests with cookies. The value is the amount of time object(s) are to be kept in the cache, regardless of Cache-Control response headers from the origin server. Use the same time formats as pin-in-cache.
